Every actual entity [natura] is therefore good; a greater good if it cannot be corrupted, a lesser good if it can be. Yet only the foolish and unknowing can deny that it is still good even when corrupted. Whenever a thing is consumed by corruption, not even the corruption remains for it is nothing in itself, having no subsistent being in which to exist.

From this it follows that there is nothing to be called evil if there is nothing good. A good that wholly lacks an evil aspect is entirely good. Where there is every evil in a thing, its good is defective or defective. Thus there can be no evil where there is no good. This leads us to a surprising conclusion: that, since every being, in so far as it is a being, is good, if we then say that a defective thing is bad, it would seem to mean that we are saying that what is evil is good, that only what is good is ever evil and that there is no evil apart from something good. This is because every actual entity is good [innis natura bona est.] Nothing evil exists in itself, but only as an evil aspect of some actual entity. Therefore, there can be nothing evil except something good. As absurd as this sounds, nevertheless the logical connections of the argument compel us to it as inevitable. At the same time, we must take warning lest we incur the prophetic judgment which reads: "Woe to those who call evil good and good evil: who call darkness light and light darkness; who call the bitter sweet and the sweet bitter." Moreover the Lord himself saith: "An evil man brings forth evil out of the evil treasure of his heart." What, then, is an evil man but an evil entity [natura malae], since man is an entity? Now, if a man is something good because he is an entity, what, then, is a bad man except an evil good? When, however, we distinguish between these two concepts, we find that the bad man is not bad because he is a man, nor is he good because he is wicked. Rather, he is a good entity in so far as he is a man, evil in so far as he is wicked. Therefore, if anyone says that simply to be a man is evil, or that to be a wicked man is good, he rightly falls under the prophetic judgment: "Woe to him who calls evil good and good evil." For this amounts to finding fault with God's work, because man is an entity of God's creation. It also means that we are praising the defects in this particular man because he is a wicked person. Thus, every entity, even if it is a defective one, in so far as it is an entity, is good. In so far as it is defective, it is evil.

Actually, then, in these two contraries we call evil and good, the rule of the logicians fails to apply. No weather is both dark and bright and at the same time; no food or drink is both sweet and sour at the same time; no body is, at the same time and place, both white and black, nor deformed and well-formed at the same time. This principle is found to apply in almost all disjunctions: two contraries cannot coexist in a single thing. Nevertheless, while no one maintains that good and evil are not contraries, they can not only coexist, but the evil cannot exist at all without the good, or in a thing that is not a good. On the other hand, the good can exist without evil. For a man or an angel could exist and yet not be wicked, whereas there cannot be wickedness except in a man or an angel. It is good to be a man, good to be an angel; but evil to be wicked. These two contraries are thus coexistent, so that if there were no good in what is evil, then the evil simply could not be, since it can have no mode in which to exist, nor any source from which corruption springs, unless it be something corruptible. Unless this something is good, it cannot be corrupted, because corruption is nothing more than the deprival of the good. Evils, therefore, have their source in the good, and unless they are parasitic on something good, they are not anything at all. There is no other source whence an evil thing can come to be. If this is the case, then, in so far as a thing is an entity, it is unquestionably good. If it is an incorruptible entity, it is a great good. But even if it is a corruptible entity, it still has no mode of existence except as an aspect of something that is good. Only by corrupting something good can corruption inflict injury.

But when we say that evil has its source in the good, do not suppose that this denies our Lord's judgment: "A good tree cannot bear evil fruit." This cannot be, even as the Truth himself declared: "Men do not gather grapes from thorns," since thorns cannot bear grapes. Nevertheless, from good soil we can see both vines and thorns spring up. Likewise, just as a bad tree does not grow good fruit, so also an evil will does not produce good deeds. From a human nature, which is good in itself, there can spring forth either a good or an evil will. There was no other place from whence evil could have arisen in the first place except from the nature—good in itself—of an angel or a man. This is what our Lord himself most clearly shows in the passage about the trees and the fruits, for he said: "Make the tree good and the fruits will be good, or make the tree bad and its fruits will be bad." This is warning enough that bad fruit cannot grow on a good tree nor good fruit on a bad one. Yet from that same earth to which he was referring, both sorts of trees can grow.

DAVID HUME

Evil Makes a Strong Case against God's Existence

David Hume (1711–1776) constructs an impressive list of natural evils and then builds an argument against the existence of God. Careful exegesis of the text reveals two distinguishable arguments, each of which finds representation in contemporary scholarship. The first argument by this eloquent skeptic is clear enough: The claims "God exists" and "evil exists" are logically incompatible; and, since we can be sure that evil does exist, we know that God does not exist.

The second argument is somewhat less direct: Even if "God exists" and "evil exists," we have no good in what is evil, then the evil simply could not be, since it can have no mode in which to exist, nor any source from which corruption springs, unless it be something corruptible. Unless this something is good, it cannot be corrupted, because corruption is nothing more than the deprival of the good. Evils, therefore, have their source in the good, and unless they are parasitic on something good, they are not anything at all. There is no other source whence an evil thing can come to be. If this is the case, then, in so far as a thing is an entity, it is unquestionably good. If it is an incorruptible entity, it is a great good. But even if it is a corruptible entity, it still has no mode of existence except as an aspect of something that is good. Only by corrupting something good can corruption inflict injury.

But when we say that evil has its source in the good, do not suppose that this denies our Lord's judgment: "A good tree cannot bear evil fruit." This cannot be, even as the Truth himself declared: "Men do not gather grapes from thorns," since thorns cannot bear grapes. Nevertheless, from good soil we can see both vines and thorns spring up. Likewise, just as a bad tree does not grow good fruit, so also an evil will does not produce good deeds. From a human nature, which is good in itself, there can spring forth either a good or an evil will. There was no other place from whence evil could have arisen in the first place except from the nature—good in itself—of an angel or a man. This is what our Lord himself most clearly shows in the passage about the trees and the fruits, for he said: "Make the tree good and the fruits will be good, or make the tree bad and its fruits will be bad." This is warning enough that bad fruit cannot grow on a good tree nor good fruit on a bad one. Yet from that same earth to which he was referring, both sorts of trees can grow.
It is my opinion, replied Demea, that each man feels, in a manner, the truth of religion within his own breast, and, from a consciousness of his imbecility and misery rather than from any reasoning, is led to seek protection from that being on whom he and all nature is dependent. So anxious or so tedious are even the best scenes of life that futurity is still the object of all our hopes and fears. We incessantly look forward and endeavour, by prayers, adoration, and sacrifice, to appease those unknown powers whom we find, by experience, so able to afflict and oppress us. Wretched creatures that we are! What resource for us amidst the innumerable ills of life did not religion suggest some methods of atonement, and appease those terrors with which we are incessantly agitated and tormented?

I am indeed persuaded, said Philo, that the best and indeed the only method of bringing everyone to a due sense of religion is by just representations of the misery and wickedness of men. And for that purpose a talent of eloquence and strong imagery is more requisite than that of reasoning and argument. For is it necessary to prove what everyone feels within himself? It is only necessary to make us feel it, if possible, more intimately and sensibly.

The people, indeed, replied Demea, are sufficiently convinced of this great and melancholy truth. The miseries of life, the unhappiness of man, the general corruptions of our nature, the unprofitable enjoyment of pleasures, riches, honours—these phrases have become almost proverbial in all languages. And who can doubt of what all men declare from their own immediate feeling and experience?

In this point, said Philo, the learned are perfectly agreed with the vulgar; and in all letters, sacred and profane, the topic of human misery has been insisted on with the most pathetic eloquence that sorrow and melancholy could inspire. The poets, who speak from sentiments, without a system, and whose testimony has therefore the more authority, abound in images of this nature. From Homer down to Dr. Young, the whole inspired tribe have ever been sensible that no other representation of things would suit the feeling and observation of each individual.

As to authorities, replied Demea, you need not seek them. Look round this library of Cato. I shall venture to affirm that, except authors of particular sciences, such as chemistry or botany, who have no occasion to treat of human life, there is scarce one of those enlightened writers from whom the sense of human misery has not, in some passage or other, extorted a complaint and confession of it. At least, the chance is entirely on that side; and no one author has ever, so far as I can recollect, been so extravagant as to deny it.

There you must excuse me, said Philo. Leibniz has denied it, and is per-
from all the elements, which assault us form a frightful catalogue of woes, they are nothing; in comparison of those which arise within ourselves, from the distempered condition of our mind and body. How many lie under the lingering torment of diseases? Hear the pathetic enumeration of the great poet.

Intestine stone and ulcer, colic-pangs,
Demoniac frenzy, moping melancholy,
And moon-struck madness, pining atrophy,
Marasmus, and wide-wasting pestilence.
Dreary was the toasting, deep the groans: 
Drear
Tended the sick, busiest from cough to cough.
And over them triumphant Death his dart
Shook: but delay'd to strike, though oft invok'd
With vows, as their chief good and final hope.

The disorders of the mind, continued Demea, though more secret, are not perhaps less dismal and vexatious. Remorse, shame, anguish, rage, disappointment, anxiety, fear, dejection, despair—who has ever passed through life without cruel inroads from these tormentors? How many have scarcely ever felt any better sensations? Labour and poverty, so abhorred by everyone, are the certain lot of the far greater number; and those few privileged persons who enjoy ease and opulence never reach contentment or true felicity. All the goods of life united would not make a very happy man, but all the ills united would make a wretch indeed; and any one of them almost (and who can be free from every one?), nay, often the absence of one good (and who can possess all?) is sufficient to render life ineligible.

Were a stranger to drop on a sudden into this world, I would show him, as a specimen of its ills, an hospital full of diseases, a prison crowded with malefactors and debtors, a field of battle strewn with carcasses, a fleet foundering in the ocean, a nation languishing under tyranny, famine, or pestilence. To turn the gay side of life to him and give him a notion of its pleasures—whether should I conduct him? To a ball, to an opera, to court? He might justly think that I was only showing him a diversity of distress and sorrow.

There is no evading such striking instances, said Philo, but by apologies which still further aggravate the charge. Why have all men, I ask, in all ages, complained insensibly of the miseries of life? . . . They have no reason, says one; these complaints proceed only from their discontented, repining, anxious disposition. . . . And can there possibly, I reply, be a more certain foundation of misery than such a wretched temper?

But if they were really as unhappy as they pretend, says my antagonist, why do they remain in life?

Not satisfied with life, afraid of death—this is the secret chain, say I, that holds us. We are terrified, not bribed to the continuance of our existence.

It is only a false delicacy, he may insist, which a few refined spirits indulge, and which has spread these complaints among the whole race of mankind. . . . And what is this delicacy, I ask, which you blame? Is it any-
compass of human knowledge there are no inferences more certain and infallible than these. In what respect, then, do his benevolence and mercy resemble the benevolence and mercy of men? Epicurus' old questions are yet unanswered.

Is he willing to prevent evil, but not able? then he is impotent. Is he able, but not willing? then he is malevolent. Is he both able and willing? whence then is evil?

You ascribe, Cleanthes, (and I believe justly) a purpose and intention to nature. But what, I beseech you, is the object of that curious artifice and machinery which she has displayed in all animals—the preservation alone of individuals, and propagation of the species? It seems enough for her purpose, if such a rank be barely upheld in the universe, without any care or concern for the happiness of the members that compose it. No resource for this purpose: no machinery in order, merely to give pleasure or ease; no fund of pure joy and contentment; no indulgence without some want or necessity accompanying it. At least, the few phenomena of this nature are overbalanced by opposite phenomena of still greater importance.

Our sense of music, harmony, and indeed beauty of all kinds, gives satisfaction, without being absolutely necessary to the preservation and propagation of the species. But what racking pains, on the other hand, arise from gouts, gravel, megrim, toothaches, rheumatomas, where the injury to the animal machinery is either small or incalculable? Mirth, laughter, play, indolence, seem gratuitous satisfactions which have no further tendency; spleen, melancholy, discontent, superstition are pains of the same nature. How then does the Divine benevolence display itself, in the sense of you anthropomorphists? None but we mystics, and you, were pleased to call us, can account for this strange mixture of phenomena, by deriving it from attributes infinitely perfect but incomprehensible.

And have you, at last, said Cleanthes smiling, betrayed your intentions, Philo? Your long agreement with Democritus did indeed a little surprise me; but I find you were all the while erecting a concealed battery against me. And I must confess that you have now fallen upon a subject worthy of your noble spirit of opposition and controversy. If you can make out the present point, and prove mankind to be unhappy or corrupted, there is an end at once of all religion. For to what purpose establish the natural attributes of the Deity, while the moral are still doubtful and uncertain?

You take umbrage very easily, replied Democritus, at opinions the most innocent and the most generally received, even amongst the religious and devout themselves; and nothing can be more surprising than to find a topic like this—concerning the wickedness and misery of man—charged with no less than atheism and profaneness. Have not all pious divines and preachers who have indulged their rhetoric on so fertile a subject, have they not easily, I say, given a solution of any difficulties which may attend it? This world is but a point in comparison of the universe; this life but a moment in comparison of eternity. The present evil phenomena, therefore, are rectified in other regions, and in some future period of existence. And the eyes of men, being then opened to larger views of things, see the whole connection of general laws, and trace, with adoration, the benevolence and rectitude of the Deity through all the mazes and intricacies of his providence.

Not replied Cleanthes, no! These arbitrary suppositions can never be admitted, contrary to matter of fact, visible and uncontroversied. Whence can any cause be known but from its known effects? Whence can any hypothesis be proved but from the apparent phenomena? To establish one hypothesis upon another is building entirely in the air; and the utmost we ever attain by these conjectures and fictions is to ascertain the base possibility of our opinion, but never can we, upon such terms, establish its reality.

The only method of supporting Divine benevolence—and it is what I willingly embrace—is to deny absolutely the misery and wickedness of man. Your representations are exaggerated; your melancholy views mostly fictitious; your inferences contrary to fact and experience. Health is more common than sickness; pleasure than pain; happiness than misery; and for our devotion which we meet with, we attain, upon computation, a hundred enjoyments.

Admitting your position, replied Philo, which yet is extremely doubtful, you must at the same time allow, that if pain be less frequent than pleasure, it is infinitely more violent and durable. One hour of it is often able to outweigh a day, a week, a month of our common insipid enjoyments; and how many days, weeks, and months are passed by several in the most acute torments? Pleasure, scarcely in one instance, is ever able to reach ecstasy and rapture; and in no one instance can it continue for any time at its highest pitch and altitude. The spirits evaporate, the nerves relax, the fabric is disordered, and the enjoyment quickly degenerates into fatigue and unesassness. But pain, often, good God, how often! rises to torture and agony, and as longer it continues, becomes still more genuine agony and torture. Patience is exhausted, courage languishes, melancholy seizes us, and nothing terminates our misery but the removal of its cause or another event which is the sole cure of all evil, but which, from our natural folly, we regard with still greater horror and consternation.

But not to insist upon these topics, continued Philo, though most obvious, certain, and important, I must use the freedom to admonish you, Cleanthes, that you have put the controversy upon a most dangerous issue, and are unwares introducing a total scepticism into the most essential articles of natural and revealed theology. What! no method of fixing a just foundation for religion unless we allow the happiness of human life, and maintain a continued existence even in this world, with all our present pains, infirmities, vexations, and follies, to be eligible and desirable! But this is contrary to everyone's feeling and experience; it is contrary to an authority so established as nothing can subvert. No decisive proofs can ever be produced against this authority; nor is it possible for you to compute, estimate, and compare all the pains and all the pleasures in the lives of all men and of all animals; and thus, by your resting the whole system of religion on a point which, from its very nature, must for ever be uncertain, you tacitly confess that that system is equally uncertain.

But allowing you what never will be believed, at least, what you never
possibly can prove, that animal or, at least, human happiness in this life exceeds its misery, you have yet done nothing: for this is not, by any means, what we expect from infinite power, infinite wisdom, and infinite goodness. Why is there any misery at all in the world? Not by chance, surely. From some cause then. Is it from the intention of the Deity? But he is perfectly benevolent. Is it contrary to his intention? But he is almighty. Nothing can shake the solidity of this reasoning, so short, so clear, so decisive, except we assert that these subjects exceed all human capacity, and that our common measures of truth and falsehood are not applicable to them—a topic which I have all along insisted on, but which you have, from the beginning, rejected with scorn and indignation.

But I will be contented to retire still from this intrenchment, for I deny that you can ever force me in it. I will allow that pain or misery in man is compatible with infinite power and goodness in the Deity, even in your sense of these attributes: what are you advanced by all these concessions? A mere possible compatibility is not sufficient. You must prove these pure, unmixed, and uncontrollable attributes from the present mixed and confused phenomena, and from these alone. A hopeful undertaking! Were the phenomena ever so pure and unmixed, yet, being finite, they would be insufficient for that purpose. How much more, where they are also so jarring and discordant!

Here, Cleanthes, I find myself at ease in my argument. Here I triumph. Formerly, when we argued concerning the natural attributes of intelligence and design, I needed all my sceptical and metaphysical subtlety to elude your grasp. In many views of the universe and of its parts, particularly the latter, the beauty and fitness of final causes strike us with such irresistible force that all objections appear (what I believe they really are) mere cavils and sophisms; nor can we then imagine how it was ever possible for us to repose any weight on them. But there is no view of human life or of the condition of mankind from which, without the greatest violence, we can infer the moral attributes or learn that infinite benevolence, conjoined with infinite power and infinite wisdom, which we must discover by the eyes of faith alone. It is your turn now to tug the labouring oar, and to support your philosophical subtleties against the dictates of plain reason and experience.

---

J. L. Mackie

Evil and Omnipotence

J. L. Mackie (1917–1981) offers a contemporary statement of what professional philosophers call the “logical problem of evil.” Essentially, he argues that the theistic claim that God is omnipotent, omniscient, and wholly good is inconsistent with the theistic claim that there is evil in the world. He then goes on to examine weak theistic attempts to eliminate the inconsistency, concluding that any successful attempt will have to modify at least one key theistic concept (i.e., omnipotence) and thus will implicitly surrender the theistic position. According to Mackie, it is not possible both that God is omnipotent and that he was unable to create a universe containing moral good but no moral evil.

The traditional arguments for the existence of God have been fairly thoroughly criticised by philosophers. But the theologian can, if he wishes, accept this criticism. He can admit that no rational proof of God’s existence is possible. And he can still retain all that is essential to his position, by holding that God’s existence is known in some other, non-rational way. I think, however, that a more telling criticism can be made by way of traditional problem of evil. Here it can be shown, not that religious beliefs lack rational support, but that they are positively irrational, that the several parts of the essential theological doctrine are inconsistent with one another, so that the theologian can maintain his position as a whole only by a much more extreme rejection of reason than in the former case. He must now be prepared to believe, not merely what cannot be proved, but what can be disproved from other beliefs that he also holds.

The problem of evil, in the sense in which I shall be using the phrase, is a problem only for some who believe that there is a God who is both omnipotent and wholly good. And it is a logical problem, the problem of clarifying and reconciling a number of beliefs: it is not a scientific problem that might be solved by further observations, or a practical problem that might be solved by a decision or an action. These points are obvious; I mention them only because they are sometimes ignored by theologians, who sometimes parry a statement of the problem with such remarks as “Well, can you solve the problem yourself?” or “This is a mystery which may be revealed to us later” or “Evil is something to be faced and overcome, not to be merely discussed.”

In its simplest form the problem is this: God is omnipotent; God is wholly good; and yet evil exists. There seems to be some contradiction between these three propositions, so that if any two of them were true the third would be false. But at the same time all three are essential parts of most theological po-

The Problem of Evil

(4) If $S'$ were actual, $P$ would go wrong with respect to $A$.

(In thinking about this definition, remember that (4) is to be true in fact, in the actual world—not in that world $W$.)

What is important about the idea of transworld depravity is that if a person suffers from it, then it wasn’t within God’s power to actualize any world in which that person is significantly free but does no wrong—that is, a world in which he produces moral good but no moral evil.

We have been here considering a crucial contention of the Free Will Defender: the contention, namely, that

(30) God is omnipotent, and it was not within His power to create a world containing moral good but no moral evil.

How is transworld depravity relevant to this? As follows. Obviously it is possible that there be persons who suffer from transworld depravity. More generally, it is possible that everybody suffers from it. And if this possibility were actual, then God, though omnipotent, could not have created any of the possible worlds containing just the persons who do in fact exist, and containing moral good but no moral evil. For to do so He’d have to create persons who were significantly free (otherwise there would be no moral good) but suffered from transworld depravity. Such persons go wrong with respect to at least one action in any world God could have actualized and in which they are free with respect to morally significant actions; so the price for creating a world in which they produce moral good is creating one in which they also produce moral evil.

NOTES

2. Ibid., pp. 92-93.
3. Ibid., p. 93.
4. More simply the question is really just whether any good state of affairs includes an evil; a little reflection reveals that no good state of affairs can include an evil that it does not outweigh.
7. Ibid., bk 3, p. 9.
8. I am indebted to Henry Schuurman (in conversation) for helpful discussion of the difference between this propositional function and those served by a thudley or a defense.
9. This distinction is not very precise (how, exactly, are we to construe “results from?”), but perhaps it will serve our present purposes.

Soul-Making Theodicy

In the following piece, John Hick (1922–) offers a theodicy—that is, a justification of the ways of God in light of evil in the world. In contrast to the Augustinian type of theodicy, which sees present evil as representing a fall from a pristine, original state of the world, Hick develops a theodicy following Irenaeus, a bishop of the ancient church. The major theme here is not one of causal genesis, but rather the progress and development of the world. Rather than view the present condition of the world as fallen from a kind of perfection, Hick views the world as a necessary stage in the evolution of a relatively immature creation into a more mature state. God seeks to bring forth mature moral and spiritual beings who are capable of freely exercising faith in him and love toward their fellows. Hick discusses the main features of an environment that would be conducive to bringing about these results, such as the world’s not making it clear whether God exists and our being mutually vulnerable to one another. Also, Hick believes that the divine program of soul-making will culminate in the afterlife, which Hick believes must involve “universal salvation.”

Soul-Making Theodicy

Can a world in which sadistic cruelty often has its way, in which selfish loneliness is so ripe, in which there are debilitating diseases, crippling accidents, bodily and mental decay, insanity, and all manner of natural disasters be re-

The Problem of Evil

it is logically possible that a limitless power and limitlessly good God is responsible for the existence of this world. For all evil may ultimately be due to misuses of creatively freedom. But it may nevertheless be better for God to have created free than unfree beings; and it is logically possible that any and all free beings whom God might create would, as a matter of contingent fact, misuse their freedom by falling into sin. In that case it would be logically impossible for God to have created a world containing free beings and yet not containing sin and the suffering which sin brings with it. Thus it is logically possible, despite the fact of evil, that the existing universe is the work of a limitlessly good creator.

These writers are in effect arguing that the traditional Augustinian type of theodicy, based upon the fall from grace of free finite creatures—first angels and then human beings—and a consequent going wrong of the physical world, is not logically impossible. I am in fact doubtful whether their argument is sound, and will return to the question later. But even if it should be sound, I suggest that their argument wins only a Pyrrhic victory, since the logical possibility that it would establish is one which, for very many people today, is fatally lacking in plausibility. For most educated inhabitants of the modern world the biblical story of Adam and Eve, and their temptation by the devil, as myth rather than as history; and they believe that so far from having been created finitely perfect and then failing, humanity evolved out of lower forms of life, emerging in a morally, spiritually, and culturally primitive state. Further, they reject as incredible the idea that earthquake and flood, disease, decay, and death are consequences either of a human fall, or of a prior fall of angelic beings who are now exerting an evil influence upon the earth. They see all this as part of a pre-scientific world view, along with the stories of the world having been created in six days and of the sun standing still for twenty-four hours at Joshua’s command. One cannot, strictly speaking, disprove any of these ancient biblical myths and sagas, or refute their profuse elaboration in the medieval Christian picture of the universe. But those of us for whom the resulting theodicy, even if logically possible, is radically implausible, must look elsewhere for light on the problem of evil.

I believe that we find the light that we need in the main alternative strand of Christian thinking, which goes back to important constructive suggestions by the early Hellenistic Fathers of the Church, particularly St. Irenaeus (A.D. 120-202). Irenaeus himself did not develop a theodicy, but he did—through his Irenaeus, which Irenaeus himself did not develop a theodicy, but he did—together with other Greek-speaking Christian writers of that period, such as Clement of Alexandria—build a framework of thought within which a theodicy became possible which does not depend upon the idea of the fall, and which is consonant with modern knowledge concerning the origins of the human race. This theodicy cannot, as such, be attributed to Irenaeus. We should rather speak of a type of theodicy, presented in varying ways by different subsequent thinkers (the greatest of whom has been Friedrich Schleiermacher), of which Irenaeus can properly be regarded as the patron saint.

The central theme out of which this Irenaean type of theodicy has arisen is the two-stage conception of the creation of humankind, first in the “image...
and then in the “likeness” of God. Re-expressing this in modern terms, the first stage was the gradual production of homo sapiens, through the long evolutionary process, as intelligent ethical and religious animals. The human being is an animal, one of the varied forms of earthly life and consciousness, such as with the whole realm of animal existence. But the human being is uniquely intelligent, having evolved a large and immensely complex brain. Further, the human being is ethical—that is, a gregarious as well as an intelligent animal, able to realize and respond to the complex demands of social life. And the human being is a religious animal, with an innate tendency to experience the world in terms of the presence and activity of supernatural beings and powers. This then is early homo sapiens, the intelligent social animal capable of awareness of the divine. But early homo sapiens is not the Adam and Eve of Augustinian theology, living in perfect harmony with self, nature, and with God. On the contrary, the life of this being must have been a constant struggle against a hostile environment, and capable of savage violence against one’s fellow human beings, particularly outside one’s own immediate group; and this being’s concepts of the divine were primitive and often bloodthirsty. Thus existence “in the image of God” was a potentiality for knowledge of and relationship with one’s Maker rather than such knowledge and relationship as a fully realized state. In other words, people were created as spiritually and morally immature creatures, at the beginning of a long process of further growth and development, which constitutes the second stage of God’s creative work. In this second stage, in which we are a part, the intelligent, ethical, and religious animal is being brought through one’s own free responses into what Irenaeus called the divine “likeness.” The human animal is being created into a child of God. Irenaeus’ own terminology (ekklēsia, koinōnia; imago, similitudo) has as no particular merit, based as it is on a misconception of the Hebrew parallelism in Genesis 1:26; but his conception of a two-stage creation of the human, with perfection lying in the future rather than in the past, is of fundamental importance. The notion of the fall was not basic to this picture, although it was to become basic to the great drama of salvation depicted by St. Augustine and accepted within Western Christendom, including the churches stemming from the Reformation, until well into the nineteenth century. Irenaeus himself however could not, in the historical knowledge of his time, question the fact of the fall; though he treated it as a relatively minor lapse, a youthful error, rather than as the infinite crime and cosmic disaster which has ruined the whole creation. But today we can acknowledge that there is no evidence at all of a period in the distant past when humankind was in the ideal state of a fully realized “child of God.” We can accept that, so far as actual events in time are concerned, there never was a fall from an original righteousness and grace. If we want to continue to use the term fall, because of its hallowed place in the Christian tradition, we must use it to refer to the immense gap between what we actually are and what in the divine intention is eventually to be. But we must not blur our awareness that the ideal state is not something already enjoyed and lost, but is a future and as yet unrealized goal. The reality is not a perfect creation which has gone tragically wrong, but a still continuing creative process whose completion lies in the eschaton.

Let us now try to formulate a contemporary version of the Irenaeus type of theodicy, based on this suggestion of the initial creation of humankind, not as a finitely perfect, but as an immature creature at the beginning of a long process of further growth and development. We may begin by asking why one should have been created as an imperfect and developing creature rather than as the perfect being whom God is presumably intending to create? The answer, I think, consists in two considerations which converge in their practical implications, one concerned with the human’s relationship to God and the other with the relationship to other human beings. As to the first, we could have the picture of God creating finite beings, whether angels or persons, directly in God’s own presence, so that in being conscious of that which is other than one’s self, the creature is automatically conscious of God, the limitless divine reality and power, goodness and love, knowledge and wisdom, towering above one’s self. In such a situation the disproportion between creature and creator would be so great that the latter would have no freedom in relation to God; they would indeed not exist as independent autonomous persons. For what freedom could finite beings have in an immediate consciousness of the presence of one who has created them, who knows them through and through, who is limitlessly powerful as well as limitlessly loving and good, and who claims their total obedience? In order to be a person, exercising some measure of genuine freedom, the creature must be brought into existence, not in the immediate divine presence, but at a “distance” from God. This “distance” cannot of course be spatial; for God is omnipresent. It must be an epistemic distance, a distance in the cognitive dimension. And the Irenaeus hypothesis is that this “distance” consists, in the case of humans, in their existence within and as part of a world which functions as an autonomous system and from within which God is not overwhelmingly evident. It is a world, in Bonhoeffer’s phrase, eti desu non dareatu, as if there were no God. Or rather, it is religiously ambiguous, capable both of being seen as a purely natural phenomenon and of being seen as God’s creation and experienced as mediating God’s presence. In such a world one can exist as a person over against the Creator. One has space to exist as a finite being, a space created by the epistemic distance from God and protected by one’s basic cognitive freedom, one’s freedom to open or close oneself to the dawning awareness of God which is experienced naturally by a religious animal. This Irenaeus picture corresponds, I suggest, to our actual human situation. Emerging within the evolutionary process as part of the continuum of animal life, in a universe which functions in accordance with its own laws and whose workings can be investigated and described without reference to a creator, the human being is a genuine, even awesome, freedom in relation to one’s Maker. The human being is free to acknowledge and worship God; and is free—particularly since the emergence of human individuality and the beginnings of critical consciousness during the first millennia B.C.—to doubt the reality of God.
Within such a situation there is the possibility of the human being coming freely to know and love one’s Maker. Indeed, if the end state which God is seeking to bring about is one in which finite persons have come in their own freedom to know and love God, this requires creating them initially in a state which is not that of their already knowing and loving God. For it is logically impossible to create beings already in a state of having come into that state by their own free choices.

The other consideration, which converges with this in pointing to something like the human situation as we experience it, concerns our human moral nature. We can approach it by asking why humans should not have been created at this epistemic distance from God, and yet at the same time as morally perfect beings? That persons could have been created morally perfect and yet free, so that they would always in fact choose rightly, has been argued by such critics of the free-will defense in theodicy as Anthony Flew and J. L. Mackie, and argued against by Alvin Plantinga and other upholders of that form of theodicy. On the specific issue defined in the debate between them, it appears to me that a perfectly good being, although formally free to sin, would in fact never do so. If we imagine such a being in a morally frictionless environment, involving no stresses or temptations, then we must assume that one would exemplify the ethical equivalent of Newton’s first law of motion, which states that a moving body will continue in uniform motion until interfered with by some outside force. By analogy, a perfectly good being would continue in the same moral course forever, there being nothing in the environment to throw one off it. But even if we suppose the morally perfect being to exist in an imperfect world, in which one is subject to temptations, it still follows that, in virtue of moral perfection, one will always overcome those temptations—as in the case, according to orthodox Christian belief, of Jesus Christ. It is, to be sure, logically possible, as Plantinga and others argue, that a free being, simply as such, may at any time contingently decide to sin. However, a responsible free being does not act randomly, but on the basis of moral nature. And a free being whose nature is wholly and unqualifiedly good will accordingly never in fact sin.

But if God could, without logical contradiction, have created humans as wholly good free beings, why did God not do so? Why was humanity not initially created in possession of all the virtues, instead of having to acquire them through the long hard struggle of life as we know it? The answer, I suggest, appeals to the principle that virtues which have been formed within the agent as a hard-won deposit of her own right decisions in situations of challenge and temptation, are intrinsically more valuable than virtues created within her ready made and without any effort on her own part. This principle expresses a basic value judgment, which cannot be established by argument but which one can only present, in the hope that it will be as morally plausible, and indeed compelling, to others as to oneself. It is, to repeat, the judgment that a moral goodness which exists as the agent’s initial given nature, without ever having been chosen by her in the face of temptations to the contrary, is intrinsically less valuable than a moral goodness which has been built up through the agent’s own responsible choices through time in the face of alternative possibilities.

If, then, God’s purpose was to create finite persons embodying the most valuable kind of moral goodness, God would have to create them, not as already perfect beings but rather as imperfect creatures who can then attain to the more valuable kind of goodness through their own free choices as in the course of their personal and social history new responses prompt new insights, opening up new moral possibilities, and providing a milieu in which the most valuable kind of moral nature can be developed.

We have thus far, then, the hypothesis that one is created at an epistemic distance from God in order to come freely to know and love the Maker; and that one is at the same time created as a morally immature and imperfect being in order to attain through freedom the most valuable quality of goodness. The end sought, according to this hypothesis, is the full realization of the human potentialities in a unitary spiritual and moral perfection in the divine kingdom. And the question we have to ask is whether humans as we know them, and the world as we know it, are compatible with this hypothesis.

Clearly we cannot expect to be able to deduce our actual world in its concrete character, and our actual human nature as part of it, from the general concept of spiritually and morally immature creatures developing ethically in an appropriate environment. No doubt there is an immense range of possible worlds, any one of which, if actualized, would exemplify this concept. All that we can hope to do is to show that our actual world is one of these.

And when we look at our human situation as part of the evolving life of this planet we can, I think, see that it fits this specification. As animal organisms, integral to the whole ecology of life, we are programmed for survival. In pursuit of survival, primitives not only killed other animals for food but fought other human beings when their vital interests conflicted. The life of presistoric persons must indeed have been a constant struggle to stay alive, prolonging an existence which was, in Hobbes’ phrase, “poor, nasty, brutish and short.” And in his basic animal self-regardingness humankind was, and is morally imperfect. In saying this I am assuming that the essence of moral evil is selfishness, the sacrificing of others to one’s own interests. It consists, in Kantian terminology, in treating others, not as ends in themselves, but as means to one’s own ends. This is what the survival instinct demands. And yet we are also capable of love, of self-giving in a common cause, of a conscience which responds to others in their needs and dangers. And with the development of civilization we see the growth of moral insight, the glimpsing and gradual assimilation of higher ideals, and tension between our animality and our ethical values. But that the human being has a lower as well as a higher nature, that one is an animal as well as a potential child of God, and that one’s moral goodness is won from a struggle with one’s own innate selfishness, is inevitable given one’s continuity with the other forms of animal life. Further, the human animal is not responsible for having come into existence as an animal. The ultimate responsibility for humankind’s existence, as a morally im-
perfect creature, can only rest with the Creator. The human does not, in one's own degree of freedom and responsibility, choose one's origin, but rather one's destiny.

This then, in brief outline, is the answer of the Irenaean type of theodicy to the question of the origin of moral evil: the general fact of human kind's basic self-regarding animality is an aspect of creation as part of the realm of organic life; and this basic self-regardingness has been expressed over the centuries both in signs of individual selfishness and in the much more massive sins of corporate selfishness, institutionalized in slavery and exploitation and all the many and complex forms of social injustice.

But nevertheless our sinful nature in a sinful world is the matrix within which God is gradually creating children of God out of human animals. For it is as men and women freely respond to the claim of God upon their lives, transmuting their animality into the structure of divine worship, that the creation of humanity is taking place. And in its concrete character this response consists in every form of moral goodness, from unselfish love in individual personal relationships to the dedicated and selfless striving to end exploitation and to create justice within and between societies.

But one cannot discuss moral evil without at the same time discussing the non-moral evil of pain and suffering. (I propose to mean by “pain” physical pain, including the pains of hunger and thirst; and by “suffering” the mental and emotional pain of loneliness, anxiety, remorse, lack of love, fear, grief, envy, etc.) For what constitutes moral evil as evil is the fact that it causes pain and suffering. It is impossible to conceive of an instance of moral evil, or sin, which is not productive of pain or suffering to anyone at any time. But in addition to moral evil there is another source of pain and suffering in the structure of the physical world, which produces storms, earthquakes, and floods and which afflicts the human body with diseases—cholera, epilepsy, cancer, malaria, arthritis, rickets, meningitis, etc.—as well as with broken bones and other outcomes of physical accident. It is true that a great deal both of pain and of suffering is humanly caused, not only by the inhumanity of man to man but also by the stresses of our individual and corporate lifestyles, causing many disorders—not only lung cancer and cirrhosis of the liver but many cases of heart disease, stomach and other ulcers, strokes, etc.—as well as accidents. But there remain nevertheless, in the natural world itself, permanent causes of human pain and suffering. And we have to ask why an unlimitedly good and unlimitedly powerful God should have created so dangerous a world, both as regards its purely natural hazards of earthquake and flood, etc., and as regards the liability of the human body to so many ills, both psychosomatic and purely somatic.

The answer offered by the Irenaean type of theodicy follows from and is indeed integrally bound up with its account of the origin of moral evil. We have the hypothesis of humankind being brought into being within the evolutionary process as a spiritually and morally immature creature, and then growing and developing through the exercise of freedom in this religiously ambiguous world. We can now ask what sort of a world would constitute an appropriate environment for this second stage of creation? The development of human personality—moral, spiritual, and intellectual—is a product of challenge and response. It does not occur in a static situation demanding no exertion and no choices. So far as intellectual development is concerned, this is a well-established principle which underlies the whole modern educational process, from preschool nurseries designed to provide a rich and stimulating environment, to all forms of higher education designed to challenge the intellect. At a basic level the essential part played in learning by the learner's own active response to environment was strikingly demonstrated by the Held and Hein experiment with kittens. Of two litter-mate kittens in the same artificial environment one was free to exercise its own freedom and intelligence in exploring the environment, while the other was suspended in a kind of “gondola” which moved whenever and wherever the free kitten moved. Thus the second kitten had a similar succession of visual experiences as the first, but did not exert itself or make any choices in obtaining them. And whereas the first kitten learned in the normal way to conduct itself safely within its environment, the second did not. With no interaction with a challenging environment there was no development in its behavioral patterns. And I think we can safely say that the intellectual development of humanity has been due to interaction with an objective environment functioning in accordance with its own laws, an environment which we have had actively to explore and to cooperate with in order to escape its perils and exploit its benefits. In a world devoid both of dangers to be avoided and rewards to be won we may assume that there would have been virtually no development of the human intellect and imagination, and hence of either the sciences or the arts, and hence of human civilization or culture.

The fact of an objective world within which one has to learn to live, on penalty of pain or death, is also basic to the development of one's moral nature. For it is because the world is one in which men and women can suffer harm—by violence, disease, accident, starvation, etc.—that our actions affecting one another have moral significance. A morally wrong act is, basically, one which harms some part of the human community; while a morally right action is, on the contrary, one which prevents or neutralizes harm or which preserves or increases human wellbeing. Now we can imagine a paradise in which no one can ever come to any harm. It could be a world which, instead of having its own fixed structure, would be plastic to human wishes. Or it could be a world with a fixed structure, and hence the possibility of damage and pain, but whose structure is suspended or adjusted by special divine action whenever necessary to avoid human pain. Thus, for example, in such a miraculously pain-free world one who falls accidentally off a high building would presumably float unharmed to the ground; bullets would become in- substantial when fired at a human body; poisons would cease to poison; water to drown, and so on. We can at least begin to imagine such a world. And a good deal of the older discussion of the problem of evil—for example in Part xi of Hume's Dialogues Concerning Natural Religion—assumed that it must be the intention of a limitlessly good and powerful Creator to make for
human creatures a pain-free environment; so that the very existence of pain is evidence against the existence of God. But such an assumption overlooks the fact that a world in which there can be no pain or suffering would also be one in which there can be no moral choices and hence no possibility of moral growth and development. For in a situation in which no one can ever suffer injury or be liable to pain or suffering there would be no distinction between right and wrong action. No action would be morally wrong, because no action could have harmful consequences; and likewise no action would be morally right in contrast to wrong. Whatever the values of such a world, it clearly could not serve a purpose of the development of its inhabitants from self-regarding animality to self-giving love.

Thus the hypothesis of a divine purpose in which finite persons are created at an epistemic distance from God, in order that they may gradually become children of God through their own moral and spiritual choices, requires that their environment, instead of being a pain-free and stress-free paradise, be broadly the kind of world of which we find ourselves to be a part. It requires that it be such as to provoke the theological problem of evil. For it requires that it be an environment which offers challenges to be met, problems to be solved, dangers to be faced, and which accordingly involves real possibilities of hardship, disaster, failure, defeat, and misery as well as of delight and happiness, success, triumph and achievement. For it is by grappling with the real problems of a real environment, in which a person is one form of life among many, and which is not designed to minister exclusively to one’s well-being, that one can develop in intelligence and in such qualities as courage and determination. And it is in the relationships of human beings with one another, in the context of this struggle to survive and flourish, that they can develop the higher values of mutual love and care, of self-sacrifice for others, and of commitment to a common good.

To summarize thus far:

1. The divine intention in relation to human-kind, according to our hypothesis, is to create perfect finite personal beings in familial relationship with their Maker.
2. It is logically impossible for humans to be created already in this perfect state, because in its spiritual aspect it involves coming freely to an uncoerced consciousness of God from a situation of epistemic distance, and in its moral aspect, freely choosing the good in preference to evil.
3. Accordingly the human being was initially created through the evolutionary process, as a spiritually and morally immature creature, and as part of a world which is both religiously ambiguous and ethically demanding.
4. Thus that one is morally imperfect (i.e., that there is moral evil), and that the world is a challenging and even dangerous environment (i.e., that there is natural evil), are necessary aspects of the present

stage of the process through which God is gradually creating perfected finite persons.

In terms of this hypothesis, as we have developed it thus far, then, both the basic moral evil in the human heart and the natural evils of the world are compatible with the existence of a Creator who is unlimited in both goodness and power. But is the hypothesis plausible as well as possible? The principal threat to its plausibility comes, I think, from the sheer amount and intensity of both moral and natural evil. One can accept the principle that in order to arrive at a freely chosen goodness one must start out in a state of moral immaturity and imperfection. But is it necessary that there should be the depths of demonic malice and cruelty which each generation has experienced, and which we have seen above all in recent history in the Nazi attempt to exterminate the Jewish population of Europe? Can any future fulfillment be worth such horrors? This was Dostoyevsky’s haunting question: “Imagine that you are creating a fabric of human destiny with the object of making men happy in the end, giving them peace and rest at last, but that it was essential and inevitable to torture to death only one tiny creature—that baby beating its breast with its fist, for instance—and to find that edifice on its unavenged tears, would you consent to be the architect on those conditions?” The theistic answer is one which may be true but which takes so large a view that it baffles the imagination. Intelectually one may be able to see, but emotionally one cannot be expected to feel, its truth; and in that sense it cannot satisfy us. For the theistic answer is that if we take with full seriousness the value of human freedom and responsibility as essential to the eventual creation of perfected children of God, then we cannot consistently want God to revoke that freedom when its wrong exercise becomes intolerable to us. From our vantage point within the historical process we may indeed cry out to God to revoke his gift of freedom, or to overrule it by some secret or open intervention. Such a cry must have come from millions caught in the Jewish Holocaust, or in the yet more recent laying waste of Korea and Vietnam, or from the victims of racism in many parts of the world. And the thought that humankind’s moral freedom is indivisible, and can lead eventually to a culmination of limitless value which could never be attained without that freedom, and which is worth any finite suffering in the course of its creation, can be of no comfort to those who are now in the midst of that suffering. But while fully acknowledging this, I nevertheless want to insist that this existential answer may well be true. Expressed in religious language it tells us to trust in God even in the midst of deep suffering, for in the end we shall participate in his glorious kingdom.

Again, we may grant that a world which is to be a person-making environment cannot be a pain-free paradise but must contain challenges and dangers, with real possibilities of many kinds of accident and disaster, and the pain and suffering which they bring. But need it contain the worst forms of disease and catastrophe? And need misfortune fall upon us with such heartbreaking indiscriminateness? Once again there are answers, which may well
be true, and yet once again the truth in this area may offer little in the way of pastoral balm. Concerning the intensity of natural evil, the truth is probably that our judgments of intensity are relative. We might identify some form of natural evil as the worst that there is—say, the agony that can be caused by death from cancer—and claim that a loving God would not have allowed this to exist. But in a world in which there was no cancer, something else would then rank as the worst form of natural evil. If we then eliminate this; something else; and so on. And the process would continue until the world was free of all natural evil. For whatever form it is for the time being remaining would be intolerable to the inhabitants of that world. But in removing all occasions of pain and suffering, and hence all challenge and all need for mutual care, we should have converted the world from a person-making into a static environment, which could not elicit moral growth. In short, having accepted that a person-making world must have its dangers and therefore also its tragedies, we must accept that whatever form these take will be intolerable to the inhabitants of that world. There could not be a person-making world devoid of what we call evil; and evils are not intolerable—except for the sake of greater goods which may come out of them.

But accepting that a person-making environment must contain causes of pain and suffering, and that no pain or suffering is going to be acceptable, one of the most daunting and even terrifying features of the world is that calamity strikes indiscriminately. There is no justice in the incidence of disease, accident, disaster and tragedy. The righteous as well as the unrighteous are struck down by illness and afflicted by misfortune. There is no security in goodness, but the wicked are equally as likely as the good to suffer "the slings and arrows of outrageous fortune." From the time of Job this fact has set a glaring question mark against the goodness of God. But let us suppose that things were otherwise. Let us suppose that misfortune came upon humankind, not haphazardly but justly and therefore not haphazardly. Let us suppose that instead of coming without regard to moral considerations, it was proportioned to desert, so that the sinner was punished and the virtuous rewarded. Would such a dispensation serve a person-making purpose? Surely not. For it would be evident that wrong deeds bring disaster upon the agent whilst good deeds bring health and prosperity; and in such a world truly moral action, action done because it is right, would be impossible. The fact that natural evil is not morally directed, but is a hazard which comes by chance, is thus an intrinsic feature of a person-making world.

In other words, the very mystery of natural evil, the very fact that disasters afflict human beings in contingent, undirected and haphazard ways, is itself a necessary feature of a world that calls forth mutual aid and builds up mutual caring and love. Thus on the one hand it would be completely wrong to say that God sends misfortune upon individuals, so that their death, maiming, starvation or ruin is God’s will for them. But on the other hand God has set us in a world containing unpredictable contingencies and dangers, in which unexpected and undeserved calamities may occur to anyone; because only in such a world can mutual caring and love be elicited. As an abstract philosophical hypothesis this may offer little comfort. But translated into religious language it tells us that God’s good purpose enforces the entire process of this world, with all its good and bad contingencies, and that even amidst tragic calamity and suffering we are still within the sphere of God’s love and are moving towards God’s kingdom.

But there is one further all-important aspect of the Irenaeus type of theodicy, without which all the foregoing would lose its plausibility. This is the eschatological aspect. Our hypothesis depicts persons as still in course of creation towards an end state of perfected personal community in the divine kingdom. This end state is conceived of as one in which individual egoity has been transcended in communal unity before God. And in the present phase of that creative process the naturally self-centered human animal has the opportunity freely to respond to God’s non-restrictive self-disclosures, through the work of prophets and saints, through the resulting religious traditions, and through the individual’s religious experience. Such response always has an ethical aspect; for the growing awareness of God is at the same time a growing awareness of the moral claim which God’s presence makes upon the way in which we live.

But it is very evident that this person-making process, leading eventually to perfect human community, is not completed on this earth. It is not completed in the life of the individual—or at best only in the few who have attained to sanctification, or moksha, or nirvana on this earth. Clearly the enormous majority of men and women die without having attained to this. As Eric Fromm has said, "The tragedy in the life of most of us is that we die before we are fully born." And therefore if we are as likely as all reasonable people are to postulate the potentials of our human nature, this can only be in a continuation of our lives in another sphere of existence after bodily death. And it is equally evident that the perfect all-embracing human community, in which self-regarding humankind has been transcended in mutual love, not only has not been realized in this world, but never can, since hundreds of generations of human beings have already lived and died and accordingly could not be part of any ideal community established at some future moment of earthly history. Thus if the unity of humankind in God’s presence is ever to be realized it will have to be in some sphere of existence other than our earth. In short, the fulfillment of the divine purpose, as it is postulated in the Irenaeus type of theodicy, presupposes each person’s survival, in some form, of bodily death, and further living and growing towards that end state. Without such an eschatological fulfillment, this theodicy would collapse.

A theodicy which presupposes and requires an eschatology will thereby be rendered implausible in the minds of many today. I nevertheless do not see how any coherent theodicy can avoid eschatology. Indeed I would go further and say that the belief in the reality of a limitless loving and powerful deity must incorporate some kind of eschatology according to which God holds in being the creatures whom God has made for fellowship with himself, beyond bodily death, and brings them into the eternal fellowship which God has intended for them. I have tried elsewhere to...
argue that such an eschatology is a necessary corollary of ethical monotheism: to argue for the realistic possibility of an afterlife or lives, despite the philosophical and empirical arguments against this; and even to spell out some of the general features which human life after death may possibly have. Since all this is a very large task, which would far exceed the bounds of this essay, I shall not attempt to repeat it here but must refer the reader to my existing discussion of it. It is that extended discussion that constitutes my answer to the question whether an Irenaean theodicy, with its eschatology, may not be as implausible as an Augustinian theodicy, with its human or angelic fall. (If it is, then the latter is doubly implausible; for it also involves an eschatology!)

There is however one particular aspect of eschatology which must receive some treatment here, however brief and inadequate. This is the issue of "universal salvation" versus "heaven and hell" (or perhaps annihilation instead of hell). If the justification of evil within the creative process lies in the limitless and eternal good of the end state to which it leads, then the completeness of the justification must depend upon the completeness, or universality, of the salvation achieved. Only if it includes the entire human race can it justify the sins and sufferings of the entire human race throughout all history. But, having given human beings cognitive freedom, which in turn makes possible moral freedom, can the Creator bring it about that in the end all his human creatures freely turn to God in love and trust? The issue is a very difficult one; but I believe that it is in fact possible to reconcile a full affirmation of human freedom with a belief in the ultimate universal success of God's creative work. We have to accept that creatively freedom always occurs within the limits of a basic nature that we did not ourselves choose; for this is entailed by the fact of having been created. If then a real though limited freedom does not preclude our being endowed with a certain nature, it does not preclude our being endowed with a basic Godward bias, so that, quoting from another side of St. Augustine's thought, "our hearts are restless until they find their rest in Thee." If this is so, it can be predicted that sooner or later, in our own time and in our own way, we shall all freely come to God; and universal salvation can be affirmed, not as a logical necessity but as the contingent but predictable outcome of the process of the universe, interpreted theistically. Once again, I have tried to present this argument more fully elsewhere, and to consider various objections to it.6

On this view the human, endowed with a real though limited freedom, is basically formed for relationship with God and destined ultimately to find the fulfillment of his or her nature in that relationship. This does not seem to me excessively paradoxical. On the contrary, given the theistic postulate, it seems to me to offer a very probable account of our human situation. If so, it is a situation in which we can rejoice; for it gives meaning to our temporal existence as the long process through which we are being created, by our own free responses to life's mixture of good and evil, into "children of God" who "inherit eternal life."
based on the existence of evil. The final question is: What position should the informed atheist take concerning the rationality of theistic belief? Three different answers an atheist may give to this question serve to distinguish three varieties of atheism: unfriendly atheism, indifferent atheism, and friendly atheism. In the final part of the paper I discuss and defend the position of friendly atheism.

Before we consider the argument from evil, we need to distinguish a narrow and a broad sense of the terms "theist," "atheist," and "agnostic." By a "theist" in the narrow sense I mean someone who believes in the existence of an omnipotent, omniscient, eternal, supremely good being who created the world. By a "theist" in the broad sense I mean someone who believes in the existence of some sort of divine being or divine reality. To be a theist in the narrow sense is also to be a theist in the broad sense, but one may be a theist in the broad sense—as was Paul Tillich—without believing that there is a supremely good, omnipotent, omniscient, eternal being who created the world. Similar distinctions must be made between a narrow and a broad sense of the terms "atheist" and "agnostic." To be an atheist in the broad sense is to deny the existence of any sort of divine being or divine reality. Tillich was not an atheist in the broad sense. But he was an atheist in the narrow sense, for he denied that there exists a divine being that is all-knowing, all-powerful and perfectly good. In this paper I will be using the terms "theist," "theist," "atheist," "atheist," "agnosticist," and "agnostic" in the narrow sense, not in the broad sense.

In developing the argument for atheism based on the existence of evil, it will be useful to focus on some particular evil that our world contains in considerable abundance. Intense human and animal suffering, for example, occurs daily and in great plentitude in our world. Such intense suffering is a clear case of evil. Of course, if the intense suffering leads to some greater good, a good we could not have obtained without undergoing the suffering in question, we might conclude that the suffering is justified, but it remains an evil nevertheless. For we must not confuse the intense suffering in and of itself with the good things to which it sometimes leads or of which it may be a necessary part. Intense human or animal suffering is in itself bad, an evil, even though it may sometimes be justified by virtue of being a part of, or leading to, some good which is unobtainable without it. What is evil in itself may sometimes be good as a means because it leads to something that is good in itself. In such a case, while remaining an evil in itself, the intense human or animal suffering is, nevertheless, an evil which someone might be morally justified in permitting.

Taking human and animal suffering as a clear instance of evil which occurs with great frequency in our world, the argument for atheism based on evil can be stated as follows:

1. There exist instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse?
2. An omnipotent, wholly good being would prevent the occurrence of any intense suffering if it could, unless it could not do so without thereby losing some greater good or permitting some evil equally bad or worse.
3. There does not exist an omnipotent, omniscient, wholly good being.

What are we to say about this argument for atheism, an argument based on the profusion of one sort of evil in our world? The argument is valid; therefore, if we have rational grounds for accepting its premises, to that extent we have rational grounds for accepting atheism. Do we, however, have rational grounds for accepting the premises of this argument?

Let's begin with the second premise. Let 1 be an instance of intense human or animal suffering which an omnipotent, wholly good being could prevent. We will also suppose that things are such that s1 will occur unless prevented by the omnipotent, wholly good (OG) being. We might be interested in determining what would be a sufficient condition of OG failing to prevent s1. But, for our purpose here, we need only try to state a necessary condition for OG failing to prevent s1. That condition, so it seems to me, is this:

Either (i) there is some greater good, G, such that G is obtainable by OG only if OG permits s1, or (ii) there is some greater good, G, such that G is obtainable by OG only if OG permits either s1 or some evil equally bad or worse, or (iii) s1 is such that it is preventable by OG only if OG permits some evil equally bad or worse.

It is important to recognize that (iii) is not included in (i). For losing a good greater than s1 is not the same as permitting an evil greater than s1. And this because the absence of a good state of affairs need not itself be an evil state of affairs. It is also important to recognize that s1 might be such that it is preventable by OG without losing G (so condition (i) is not satisfied) but also such that if OG did prevent it, G would be lost unless OG permitted some evil equal to or worse than s1. If this were so, it does not seem correct to require that OG prevent s1. Thus, condition (iii) takes into account an important possibility not encompassed in condition (i).

Is it true that if an omnipotent, wholly good being permits the occurrence of some intense suffering it could have prevented, then either (i) or (ii) or (iii) obtains? It seems to me that it is true. But if it is true then so is premise (2) of
the argument for atheism. For that premise merely states in more compact form what we have suggested must be true if an omniscient, wholly good being fails to prevent some intense suffering it could prevent. Premise (2) says that an omniscient, wholly good being would prevent the occurrence of any intense suffering it could, unless it could not do so without thereby losing some greater good or permitting some evil equally bad or worse. This premise (or something not too distant from it) is, I think, held in common by many atheists and nontheists. Of course, there may be disagreement about whether something is good, and whether, if it is good, one would be morally justified in permitting some intense suffering to occur in order to obtain it. Someone might hold, for example, that no good is great enough to justify permitting an innocent child to suffer terribly. Again, someone might hold that the mere fact that a given good outweighs some suffering and would be lost if the suffering were prevented, is not a morally sufficient reason for permitting the suffering. But to hold either of these views is not to deny (2). For (2) claims only that if an omniscient, wholly good being permits intense suffering then either there is some greater good that would have been lost, or some equally bad or worse evil that would have occurred, had the intense suffering been prevented. (2) does not purport to describe what might be a sufficient condition for an omniscient, wholly good being to permit intense suffering, only what is a necessary condition. So stated, (2) seems to express a belief that accords with our basic moral principles, principles shared by both theists and nontheists. If we are to fault the argument for atheism, therefore, it seems we must find some fault with its first premise.

Suppose in some distant forest lightning strikes a dead tree, resulting in a forest fire. In the fire a fawn is trapped, horribly burned, and lies in terrible agony for several days before death releases it from its suffering. So far as we can obtain that good the fawn’s intense suffering is pointless. For there does not appear to be any greater good such that the prevention of the fawn’s suffering would require either the loss of that good or the occurrence of an evil equally bad or worse. Nor does there seem to be any equally bad or worse evil so connected to the fawn’s suffering that it would have had to occur had the fawn’s suffering been prevented. Could an omnipotent, omniscient being have prevented the fawn’s apparently pointless suffering? The answer is obvious, as even the theist will insist. An omnipotent, omniscient being could have easily prevented the fawn from being horribly burned, or, given the burning, could have spared the fawn the intense suffering by quickly ending its life, rather than allowing the fawn to lie in terrible agony for several days. Since the fawn’s intense suffering was preventable, so far as we can see, pointless, doesn’t it appear that premise (1) of the argument is true, that there do exist instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse?

It must be acknowledged that the case of the fawn’s apparently pointless suffering does not prove that (1) is true. For even though we cannot see how the fawn’s suffering is required to obtain some greater good (or to prevent some equally bad or worse evil), it hardly follows that it is not so required. After all, we are often surprised by how things we thought to be unconnected turn out to be intimately connected. Perhaps, for all we know, there is some familiar good outweighing the fawn’s suffering to which that suffering is connected in a way we do not see. Furthermore, there may well be unfamiliar goods we haven’t dreamed of, to which the fawn’s suffering is intrinsically connected. Indeed, it would seem to require something like omniscience on our part before we could lay claim to knowing that there is no greater good connected to the fawn’s suffering in such a manner that an omnipotent, omniscient being could not have achieved that good without permitting that suffering or some evil equally bad or worse. So the case of the fawn’s suffering surely does not enable us to establish the truth of (1).

The truth is that we are not in a position to prove that (1) is true. We cannot know with certainty that instances of suffering of the sort described in (1) do occur in our world. But it is one thing to know or prove that (1) is true and quite another thing to have rational grounds for believing (1) to be true. We are often in the position where in the light of our experience and knowledge it is rational to believe that a certain statement is true, even though we are not in a position to prove or to know with certainty that the statement is true. In the light of our past experience and knowledge it is, for example, very reasonable to believe that neither Goldwater nor McGovern will ever be elected President, but we are scarcely in the position of knowing with certainty that neither will ever be elected President. So, too, with (1), although we cannot know with certainty that it is true, it perhaps can be rationally supported, shown to be a rational belief.

Consider again the case of the fawn’s suffering. Is it reasonable to believe that there is some greater good so intimately connected to that suffering that even an omnipotent, omniscient being could not have achieved without permitting that suffering or some evil at least as bad? It certainly does not appear reasonable to believe this. Nor does it seem reasonable to believe that there is some evil at least as bad as the fawn’s suffering such that an omnipotent being simply could not have prevented it without permitting the fawn’s suffering. But even if it should somehow be reasonable to believe either of these things of the fawn’s suffering, we must then ask whether it is reasonable to believe either of these things of all the instances of seemingly pointless human and animal suffering, that occur daily in our world. And surely the answer to this more general question must be no. It seems quite unlikely that all the instances of intense suffering, occurring daily in our world are intimately related to the occurrence of greater goods or the prevention of evils at least as bad; and even more unlikely, should they somehow all be so related, that an omnipotent, omniscient being could not have achieved at least some of those goods (or prevented some of those evils) without permitting the instances of intense suffering that are supposedly related to them. In the light of our experience and knowledge of the variety and scale of human and animal suffering in our world, the idea that none of this suffering could have been prevented by an omnipotent being without thereby losing a
greater good or permitting an evil at least as bad seems an extraordinary absurd idea, quite beyond our belief. It seems then that although we cannot prove that (1) is true, it is, nevertheless, altogether reasonable to believe that (3) is true, that (1) is a rational belief.5

Returning now to our argument for atheism, we've seen that the second premise expresses a basic belief common to many theists and nontheists. We've also seen that our experience and knowledge of the variety and profusion of suffering in our world provides rational support for the first premise. Seeing that the conclusion, "There does not exist an omnipotent, omniscient, wholly good being" follows from these two premises, it does seem that we have rational support for atheism, that it is reasonable for us to believe that the theistic God does not exist.

II

Can theist be rationally defended against the argument for atheism we have just examined? If it can, how might the theist best respond to that argument? Since the argument from (1) and (2) to (3) is valid, and since the theist, no less than the nontheist, is more than likely committed to (2), it's clear that the theist can reject this atheistic argument only by rejecting its first premise, the premise that states that there are instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse. How, then, can the theist best respond to this premise and the considerations advanced in its support?

There are basically three responses a theist can make. First, he might argue that (1) is false or probably false, but only that the reasoning given in support of it is incorrect in some way. He may do this either by arguing that the reasons given in support of (1) are insufficient to justify accepting (1), or by arguing that there are other things we know which, when taken in conjunction with these reasons, do not justify us in accepting (1). I suppose some theists would be content with this rather modest response to the basic argument for atheism. But given the validity of the basic argument and the theist's likely acceptance of (2), he is thereby committed to the view that (1) is false, not just that we have no good reasons for accepting (1) as true. The second two responses are aimed at showing that it is reasonable to believe that (1) is false. Since the theist is committed to this view, I shall focus the discussion on these two attempts, attempts which we can distinguish as "the direct attack" and "the indirect attack."

By a direct attack, I mean an attempt to reject (1) by pointing out goods, for example, to which suffering may well be connected, goods which an omnipotent, omniscient being could not achieve without permitting suffering. It is doubtful, however, that the direct attack can succeed. The theist may point out that some suffering leads to moral and spiritual development impossible without suffering. But it's reasonably clear that suffering often occurs in a degree far beyond what is required for character development. The theist may say that some suffering results from free choices of human beings and might be preventable only by preventing some measure of human freedom. But, again, it's clear that much intense suffering occurs not as a result of human free choices. The general difficulty with this direct attack on premise (1) is twofold. First, it cannot succeed, for the theist does not know what greater goods might be served, or evils prevented, by each instance of intense human or animal suffering. Second, the theist's own religious tradition usually maintains that in this life it is not given to us to know God's purpose in allowing particular instances of suffering. Hence, the direct attack against premise (1) cannot succeed and violates basic beliefs associated with theism.

The best procedure for the theist to follow in rejecting premise (1) is the indirect procedure. This procedure I shall call "the G.E. Moore shift," so-called in honor of the twentieth century philosopher, G.E. Moore, who used it to great effect in dealing with the arguments of the skeptics. Skeptical philosophers such as David Hume have advanced ingenious arguments to prove that no one can know of the existence of any material object. The premises of their arguments employ plausible principles, principles which many philosophers have tried to reject directly, but only with questionable success. Moore's procedure was altogether different. Instead of arguing directly against the premises of the skeptic's arguments, he simply noted that the premises implied, for example, that he (Moore) did not know of the existence of a pencil. Moore then proceeded indirectly against the skeptic's premises by arguing:

1. I do know that this pencil exists.
2. If the skeptic's principles are correct, I cannot know of the existence of this pencil.
3. Thus the skeptic's principles (at least one) must be incorrect.

Moore then noted that his argument is just as valid as the skeptic's, that both of their arguments contain the premise "If the skeptic's principles are correct, Moore cannot know of the existence of this pencil," and concluded that the only way to choose between the two arguments (Moore's and the skeptic's) is by deciding which of the first premises is more rational to believe—Moore's premise "I do know that this pencil exists" or the skeptic's premise asserting that his skeptical principles are correct. Moore concluded that his own first premise was the more rational of the two.

Before we see how the theist may apply the G.E. Moore shift to the basic argument of atheism, we should note the general strategy of the shift. We're given an argument, p, q, Therefore, r. Instead of arguing directly against p, another argument is constructed—not-r, q, Therefore, not-p—which begins with the denial of the conclusion of the first argument, keeps its second premise,
and ends with the denial of the first premise as its conclusion. Compare, for example, these two:

1. $p$, II. not-$r$
2. $q$, III. $r$
3. not-$p$

It is a truth of logic that if I is valid II must be valid as well. Since the arguments are the same so far as the second premise is concerned, any choice between them must concern their respective first premises. To argue against the first premise ($p$) by constructing the counter argument II is to employ the G. E. Moore shift.

Applying the G. E. Moore shift against the first premise of the basic argument for atheism, the thesis can argue as follows:

not-3. There exists an omnipotent, omniscient, wholly good being.

2. An omnipotent, wholly good being would prevent the occurrence of any intense suffering if it could, unless it could not do so without thereby losing some greater good or permitting some evil equally bad or worse.

therefore,

not-1. It is not the case that there exist instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse.

We now have two arguments: the basic argument for atheism from (1) and (2) to (3), and the thesis's best response, the argument from (not-3) and (2) to (not-1). What the thesis then says about (1) is that he has rational grounds for believing in the existence of the theistic God (not-3), accepts (2) as true, and sees that (not-1) follows from (not-3) and (2). He concludes, therefore, that he has rational grounds for rejecting (1). Having rational grounds for rejecting (1), the thesis concludes that the basic argument for atheism is mistaken.

III

We've had a look at a forceful argument for atheism and what seems to be the thesis's best response to that argument. If one is persuaded by the argument for atheism, as I find myself to be, how might one best view the position of the thesis? Of course, he will view the thesis as having a false belief, just as the thesis will view the atheist as having a false belief. But what position should the atheist take concerning the rationality of the thesis's belief? There are three major positions an atheist might take, positions which we may think of as some varieties of atheism. First, the atheist may believe that no one is rationally justified in believing that the theistic God exists. Let us call this position "unfriendly atheism." Second, the atheist may hold no belief concerning whether any thesis is or isn't rationally justified in believing that the theistic God exists. Let us call this view "indifferent atheism." Finally, the atheist may believe that some theists are rationally justified in believing that the theistic God exists. This view we shall call "friendly atheism." In this final part of the paper I propose to discuss and defend the position of friendly atheism.

If one can be rationally justified in believing a false proposition then friendly atheism is a paradoxical, if not incoherent position. But surely the truth of a belief is not a necessary condition of someone's being rationally justified in having that belief. So in holding that someone is rationally justified in believing that the theistic God exists, the friendly atheist is not committed to thinking that the thesis has a true belief. What he is committed to is that the thesis has rational grounds for his belief, a belief the atheist rejects and is convinced he is rationally justified in rejecting. But is this possible? Can someone, like our friendly atheist, hold a belief, be convinced that he is rationally justified in holding that belief, and yet believe that someone else is equally justified in believing the opposite? Surely this possibility is possible. Suppose your friend sees you off on a flight to Hawaii. Hours after take-off they learn that your plane has gone down at sea. After a twenty-four hour search, no survivors have been found. Under these circumstances they are rationally justified in believing that you have perished. But it is hardly rational for you to believe this, as you bob up and down in your life vest, wondering why the search planes have failed to spot you. Indeed, to amuse yourself while a waiting for your fate, you might very well reflect on the fact that your friends are rationally justified in believing that you are now dead, a proposition you disbelieve and are rationally justified in disbelieving. So, too, perhaps an atheist may be rationally justified in his atheistic belief and yet hold that some theists are rationally justified in believing just the opposite of what he believes.

What sort of grounds might a thesis have for believing that God exists? Well, he might endeavor to justify his belief by appealing to one or more of the traditional arguments: Ontological, Cosmological, Theological, Moral, etc. Second, he might appeal to certain aspects of religious experience, perhaps even his own religious experience. Third, he might try to justify them as a plausible theory in terms of which we can account for a variety of phenomena. Although an atheist must hold that the theistic God does not exist, can he not also believe, and be justified in so believing, that some of these "justifications of themism" do actually rationally justify some theists in their belief that there exists a supremely good, omnipotent, omniscient being? It seems to me that he can.

If we think of the long history of theistic belief and the special situations
in which people are sometimes placed, it is perhaps as absurd to think that no one was ever rationally justified in believing that the theistic God existed as it is to think that no one was ever justified in believing that human beings would never walk on the moon. But in suggesting that friendly atheism is preferable to unfriendly atheism, I don’t mean to rest the case on what some human beings might have believed in the eleventh or thirteenth century. The more interesting question is whether some people in modern society, people who are aware of the usual grounds for belief and disbelief and are acquainted to some degree with modern science, are yet rationally justified in accepting theist. Friendly atheism is a significant position only if it answers this question in the affirmative.

It is not difficult for an atheist to be friendly when he has reason to believe that theist could not reasonably be expected to be acquainted with the grounds for disbelief that he (the atheist) possesses. For then the atheist may take the view that some theists are rationally justified in holding to theism, but would not be so were they to be acquainted with the grounds for disbelief—those grounds being sufficient to tip the scale in favor of atheism when balanced against the reasons the theist has in support of his belief.

Friendly atheism becomes paradoxical, however, when the atheist contemplates believing that theist has all the grounds for atheism that he, the atheist, has, and yet is rationally justified in maintaining his theistic belief. But even so excessively friendly a view as this perhaps can be held by the atheist if he also has some reason to think that the grounds for theism are not as telling as the theist is justified in taking them to be?

In this paper I’ve presented what I take to be a strong argument for atheism, pointed out what I think is the theist’s best response to that argument, distinguished three positions an atheist might take concerning the rationality of theistic belief, and made some remarks in defense of the position called “friendly atheism.” I am aware that the central points of the paper are not likely to be warmly received by many philosophers. Philosophers who are not likely to be warmly received by many philosophers. Philosophers who are friendly atheism tend to be tough-minded—holding that there are no good reasons for supposing that theism is true. And theists tend either to reject the view that the existence of evil provides rational grounds for atheism or to hold that religious belief has nothing to do with reason and evidence at all. But such is the way of philosophy.

NOTES

1. Some philosophers have contended that the existence of evil is logically inconsistent with the existence of theistic God. No one, I think, has succeeded in establishing such an argument. Indeed, gradable incomparability, there is a fairly compelling argument for the view that the existence of evil is logically consistent with the existence of theistic God. (For a lucid statement of this argument see Alvin Plantinga, God, Freedom, and Evil (New York 1974), 29-99.) There remains, however, what we may call the evidential form—as opposed to the logical form—of the problem of evil: the view that the variety and profusion of evil in our world, although perhaps not logically inconsistent with the existence of the theistic God, provides, nevertheless, rational support for atheism. In this paper I shall be concerned solely with the evidential form of the problem, the form of the problem which, I think, presents a rather severe difficulty for theist.

2. If there is some good, G, greater than any evil, E, (1) will be false for the trivial reason that no matter what evil, E, we pick the conjunctive good state of affairs consisting of G and E that will outweigh E and be such that an omniscient being could not obtain it without permitting E. See Alvin Plantinga, God and Other Minds (Ithaca, 1967), 167. I To avoid this objection we may insert “unexplainable” into our premises (1) and (2) between “some” and “and greater.” It isn’t required for G, and G is better than G plus E, then the good conjunctive state of affairs composed of G and E would be replaceable by the greater good of G alone. For the sake of simplicity, however, I will ignore this complication both in the formulation and discussion of premises (1) and (2).

3. These clarifying points need to be made in connection with (1). First, by “good” I don’t mean to exclude the fulfillment of certain moral principles. Perhaps preventing s1 would preclude actions prescribed by the principles of justice. I shall allow that the satisfaction of certain principles of justice may be a good that outweighs the evil of s1. Second, even though (1) may suggest it, I don’t mean to limit the good in question to something that would follow in the occurrence of s1. And, finally, we shall perhaps not fault OG if the good G, that would be less we were s1, prevented, is not actually greater than s1, but merely such that allowing s1 and G as opposed to preventing s1 and thereby losing G would not alter the balance between good and evil. For reasons of simplicity, I have left this point out in stating (1), with the result that (1) is perhaps a bit stronger than it should be.

4. See Iren’s speech in bk. xx, ch. iii, of the apocryphal Kebromas.

5. One might object that the conclusion of this paragraph is stronger than the reasons given warrant. For it is one thing to argue that it is unreasonable to think that (1) is false and another thing to conclude that we are therefore justified in accepting (1) as true. There are propositions such that believing them is much more reasonable than disbeliefing them, and yet are such [without being judgment about them] more reasonable than believing them. To take an example of Chalmers’s. It is more reasonable to believe that the Pope will be in Rome (or some arbitrarily picked future date) than to believe that he won’t but it is perhaps more reasonable to suspend judgment on the question of the Pope’s whereabouts on that particular date, than to believe that he will be in Rome. Thus it might be objected, that while we’ve shown that believing (1) is more reasonable than disbeliefing (1), we haven’t shown that believing (1) is more reasonable than withholding belief. My answer to this objection is that theists tend to be tough-minded—holding that there are no good reasons for supposing that theism is true. And theists tend either to reject the view that the existence of evil provides rational grounds for atheism or to hold that religious belief has nothing to do with reason and evidence at all. But such is the way of philosophy.
The Problem of Evil

all of my evidence for p, and yet I can reasonably believe that you are justified in believing not—for I have reason to believe that your grounds for not-p are not as telling as you are justified in taking them to be.

SUGGESTED READING

PART SIX

KNOWING GOD WITHOUT ARGUMENTS

The selections in the previous two parts of this anthology illustrate an assumption that has been made by most nonfideistic philosophers of religion. The assumption, which may be termed evidentialism, is that whether or not it is reasonable to believe in God depends on one's evidence—that is, on the other things one knows or reasonably believes to be true. If the evidence one possesses provides the basis for strong arguments in favor of God's existence, and one has little evidence (or at any rate, less evidence) against it, then one rationally ought to believe in God. But if the evidence is weak, and if arguments for atheism (such as the problem of evil) are strong, then belief is rationally inappropriate.

One of the most striking recent developments in the philosophy of religion has been the emergence of an approach to religious knowledge that sharply reject evidentialism. Yet this approach is not fideistic, since it agrees that it is appropriate to assess the rational acceptability of religious beliefs. What proponents of this new approach point out is, that we may not have to accept the standard evidentialist manner of performing this assessment (i.e., weighing evidence for and against the beliefs in question). They go on to point out that we all do in fact believe implicitly in the reality of the physical objects we encounter in everyday life, and we do this without paying any serious attention to arguments for and against the existence of the "external world." They suggest that belief in God be approached in much the same way. They raise an important question in this regard: Why can't the experience of God, which many believers say they have, furnish the basis for our belief in God, just as our experience of the physical world furnishes the basis for our belief in physical objects? Why can't belief in God be a basic belief, one that is perfectly reasonable to accept without trying to find a basis for it in other things one believes to be true?

An important expression of this way of thinking is known as "Reformed epistemology" because of certain associations with the Reformed, or Calvinis-
